

Cricket Live Alerts

A Python-based desktop application that delivers live cricket match scores as popup alerts — no constant refreshing needed.

WEB SCRAPING

PYTHON

GUI

Project Overview

Cricket Live Alerts fetches live cricket data from **Cricinfo RSS feeds** and displays match details automatically. Users stay updated without manually checking websites — the app handles everything.

Live Match Details

Team names, scores, location & time

Auto-Refresh

Popup alerts every 20 seconds

User Selection

Choose any live match from the list

Key Features

Live Score Fetching

Fetches real-time cricket scores directly from Cricinfo RSS feeds

Match List Display

Shows all available live matches for user selection

Desktop Popup Alerts

GUI popup automatically displays the latest score updates

Auto-Refresh

Scores update automatically every 20 seconds without user input

Error Handling

Graceful handling of invalid inputs and network failures

Tech Stack

Language

Python — the core language powering the entire application

Modules Used

requests

HTTP data fetching from RSS feeds

bs4 (BeautifulSoup)

HTML/XML parsing for web scraping

tkinter

Desktop GUI popup creation

time & sys

Timing control and system operations

How It Works

The application runs a continuous loop — fetching, displaying, and refreshing match data so users always see the latest scores without any manual effort.

Project Structure

File Breakdown

cricket_live_alerts.py

Main application script

README.md

Project documentation

requirements.txt

Python dependencies list

Directory Tree

Cricket-Live-Alerts/

```
|
|—— cricket_live_alerts.py
|—— README.md
|—— requirements.txt
```

 A clean, minimal structure — just three files to get you up and running.

Installation

1 Clone the Repository

```
git clone https://github.com/yourusername/Cricket-Live-Alerts.git  
cd Cricket-Live-Alerts
```

2 Install Dependencies

```
pip install requests beautifulsoup4 lxml
```

3 Run the Project

```
python cricket_live_alerts.py
```

Output & Demo

What You'll See

Terminal Output

A numbered list of all live cricket matches fetched from Cricinfo

Desktop Popup

A Tkinter GUI alert window displaying team names, scores, location, and match time

Auto-Updates

The popup refreshes with the latest score every 20 seconds automatically

Learning Outcomes

Web Scraping

Parsing live data using BeautifulSoup and working with XML RSS feeds

GUI Creation

Building desktop popup alerts with Tkinter

Exception Handling

Managing invalid inputs and network failures gracefully

Data Fetching

Using the Requests library to pull live data from external sources

Team & What's Next

Team Members

Dheerj Pulime · Ganesh Sesha · Sai Akhil

★ Future Improvements

→ System tray score notifications

→ Match filtering by teams

→ Mobile notifications integration

→ Enhanced GUI dashboard

 This project is for **academic and learning purposes**.
